

March 4, 2022

Dear Century Park Resident and Family,

Since March 2020, you have battled against the coronavirus, and as difficult as this has been for the rest of the world, this virus presented heightened challenges in the lives of our residents and associates. Century Park Associates is strong only because of the tireless efforts of our teams across the country. Your patience, understanding and unwavering support through ever evolving changes is inspiring. Our mission as a company through this crisis has been to communicate with transparency and measure our approach to include updated guidelines, local, state and county requirements. Ultimately, our goal has always been to keep you safe.

Recently, the CDC updated their guidelines for mask adherence for the general public. Century Park Associates has reviewed these guidelines. After much discussion with our Chief Medical Advisor and our care team, we have decided to **recommend** these guidelines as an option for “up-to-date” vaccinated associates, visitors and residents. These guidelines are based on the positivity rates and hospitalizations of your county. We encourage residents and visitors to visit www.cdc.com to receive this updated information.

Century Park Associates will continue to highly encourage and recommend that all residents, especially those with severe medical illness, to continue to wear masks but ultimately this decision will always be a resident’s choice. Century Park Associates also encourages and supports visitation from your family and friends into your home. We understand that COVID-19 has limited their visitation and engagement, however we hope that as local county positivity rates continue to decrease, our path to unite will be strengthened.

Century Park Associates has mandated the COVID-19 vaccine for our associates and we continue to strongly encourage the vaccine and booster for both residents and associates. Our “up to date” vaccinated associates will be given the choice on mask adherence based on the local county and state guidelines. The CDC has defined “up-to-date” vaccinated people as those that receive Pfizer or Moderna vaccine primary series and the booster if it is five months after the primary series. Individuals who have received the J&J vaccine should receive the booster at least two months after receiving the first shot.

Associates that have received the Pfizer and Moderna vaccine, who do not choose to receive the booster, are required to wear a surgical mask. All our associates are required to screen daily. Please note that while Century Park Associates is offering the CDC guidelines as an option for up-to-date vaccinated associates, residents and visitors, local state and county guidelines always supercede our protocol. Our communities will continue to practice and hold to all our sanitation protocols.

Sincerely,

Esmerelda Lee

Chief Operating Officer/EVP
